Boundweave

Clotilde V. Barrett : Boundweave before purchasing it in order to gage whether or not it would be worth my time, and all praised Boundweave:

The technique of boundweave produces weft-face fabrics with pattern floats over two or more threads and is suitable for rugs, tapestries, and a variety of other fabrics. Most of the designs discussed can be woven on a 4-shaft loom. The patterns are controlled by the draft and by the colour selections of the weft. The principle of shaft switching is included, since shaft switching greatly increases the design potentials for 4-shaft boundweave.

Included in the book are explorations of the design possibilities of 3-, 6-, and 8-shaft drafts, tapestry and dye techniques, and coloured photos that display boundweave projects by contemporary weavers."1 of 2 people found the following review helpful.
